

Jeger Beton decorative effect is a unique solution that will lend your walls an exceptionally industrial character. Architectural concrete with a matte finish is recommended for use on interior walls, on virtually any type of substrates such as plasterwork, drywall or concrete.

You can do it yourself in one day!

It's just 3 steps

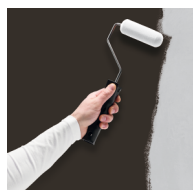

Only 2 tools

a roller

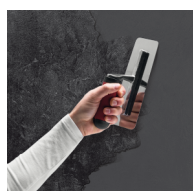

a venetian trowel

1 Apply Jeger Primer Beton Black with a roller

Apply **Jeger Primer Beton Black** to a clean, dry, dust-free and degreased wall and let it dry for about 4 hours.

2 Apply Jeger Beton Black

Mix **Jeger Beton Black** thoroughly before use. Do not dilute with water. Do not mix with other products. Apply with a Venetian trowel to the thickness of the grain and smooth. If you want to change the effect, after about 4 hours you can apply another coat and repeat the process. Apply at +8°C to +25°C at a relative humidity of max. 82%, avoid drafts. Allow to dry for about 12 h. After painting, wash the tools with warm water.

3 Protect the surface with Jeger Protector Beton Black

To protect the coating and enhance the blackness on the dried surface, apply **Jeger Protector Beton Black** with a roller according to the instructions on the label. The varnish changes the color of the surface and allows for a deeper black with a matte finish.

**Tips:** If you want to create a concrete slab effect, apply **Tape for imitating concrete slabs** to the dried first layer of concrete in the areas separating the slabs from each other. Then apply a second layer of concrete and after approx. 30 minutes remove the tape, obtaining the pattern of the slabs. Gently smooth the entire surface.

**Remember:** If you need to use more than one pack of the product, mix the contents of all the packs together before applying. Check the effect on a small area before applying the varnish to the whole surface. The product is intended for interiors.

±12 product efficiency (14kg) m<sup>2</sup>

The efficiency of the product and the number of paint layers depend on the structure and absorptency of the painted surface, its thickness, application methods and the contractor's experience.
